

# AirflowTest-Master

Professional anemometer for measuring air flow, volumetric flow and wind speed

This professional anemometer provides precise measurement of air flow, volumetric flow and wind speed. The integrated sensors constantly register the ambient temperature and relative humidity, and calculate the dew point temperature. The hold function allows the current measured value to be retained on the display. The device features a USB interface and PC software for real-time logging. The 1/4" tripod connection allows the device to be easily set up in the test area, ideal for long-term measurements. The clearly laid out, illuminated display is easy to use.
